GUIDE ALLOCATION SYSTEM — SPRINT 3 · FUNCTIONAL DOCUMENT

US10 — View Final Allocation

Document ID	GAS-FD-US10	Version	1.0
Prepared By	Development Team	Date	April 2025
User Story	As a student, I want to view my final guide allocation so that I know who will supervise my project.		

1. User Story

US10 — View Final Allocation

"As a student, I want to view my final guide allocation so that I know who will supervise my project."

Acceptance Criteria:

- Given allocation is completed (a request is accepted), when the student logs in, then the assigned guide's details should be shown on the dashboard.
- Given no guide has been allocated yet, when the student views the dashboard, then an appropriate placeholder message should be displayed.

2. Functional Description

The student dashboard contains a dedicated *My Guide* section. This section is populated by parsing the response from `GET /api/requests/my` — if any entry has `status = 'accepted'`, the faculty details (name, department, domain) from that entry are rendered as an allocation card. If no accepted request exists, a gray empty-state placeholder is shown. The section refreshes whenever the student performs a guide-request action (send, withdraw), ensuring the allocation view is always current without a page reload.

3. Input Fields

No user input — this is a read-only display component driven by server data.

4. Business Rules

- The My Guide section is visible at all times on the student dashboard, but populated only when `status = 'accepted'` exists in the student's request history.

- At most one accepted request can exist per student (enforced by the cascade-reject logic in US7).
- The displayed guide details come from a JOIN between `requests` and `faculty` tables.
- Students cannot modify or cancel their allocation from this view.
- If a faculty member is later removed by the admin (cascade delete), the allocation entry is also removed — the placeholder reappears.
- The allocation card shows: faculty name, department, domain.

5. Process Flow

#	Step	Actor	Details
1	Student logs in	Student	JWT issued; role = 'student'
2	Dashboard loads	Frontend / Dashboard.jsx	Component mounts; multiple API calls initiated
3	Fetch request history	Frontend	GET /api/requests/my — returns all requests with faculty details and status
4	Derive allocation	Frontend	Filter response: find entry where <code>status === 'accepted'</code>
5a (Allocated)	Render guide card	Frontend	Display faculty name, department, domain in 'My Guide' card with confirmation message
5b (Not allocated)	Render placeholder	Frontend	Display gray card: 'No guide allocated yet — requests are still pending'
6	Student performs action (optional)	Student	Send / withdraw request → guides list refetched → My Guide section re-evaluated

6. API Specification

Property	Value
Method	GET
URL	<code>/api/requests/my</code>
Auth	Bearer JWT (student role)
200 — Success	<code>[{ id, faculty_id, status, created_at, faculty_name, department, domain }, ...]</code>

Property	Value
Allocation derived by	Frontend filters response for <code>status === "accepted"</code>
403	<code>{ "error": "Forbidden" }</code> — non-student token
401	Missing/invalid token → apiFetch interceptor redirects to <code>/login</code>

7. UI Behaviour

Scenario	UI Response
Guide allocated (accepted request exists)	Card with faculty name (bold), department tag, domain badge, gold accent bar; text: 'Your guide has been allocated'
No guide allocated	Gray placeholder card: 'No guide allocated yet'; sub-text: 'Keep an eye on your notifications'
Faculty deleted by admin after allocation	Accepted request removed by cascade; placeholder shown on next dashboard load
Loading state	Skeleton/loading indicator while API call is in flight
API error	Placeholder shown; no crash (array guard in place)

8. Database Schema

Data is derived from a JOIN — no new table.

Table	Column	Type	Role in Allocation View
requests	student_id	INTEGER FK	Filter to current logged-in student
requests	faculty_id	INTEGER FK	JOIN key to faculty table
requests	status	TEXT	Filter: only rows where status = 'accepted'
faculty	name	TEXT	Displayed as guide name
faculty	department	TEXT	Displayed as department
faculty	domain	TEXT	Displayed as expertise domain

US10 — View Final Allocation

Document ID	GAS-TC-US10	Version	1.0
Prepared By	Development Team	Date	April 2025
Environment	Frontend: localhost:5173 · Backend: localhost:3001 · DB: SQLite (guide_allocation.db)		
Precondition	Both servers running; student accounts exist with and without accepted guide requests		

Test Summary

5 Total	5 Pass	0 Fail	0 Pending
------------	-----------	-----------	--------------

Test Cases

TC ID	Test Case	Priority	Preconditions	Test Steps	Expected Result	Status
TC-US10-01	Allocated guide shown after request acceptance	High	Student has an accepted guide request in DB (faculty_name: Dr. Smith, dept: CS, domain: ML)	1. Login as the student 2. View dashboard My Guide section	Guide card displays Dr. Smith's name, department (CS), domain (ML); confirmation text shown	PASS
TC-US10-02	Placeholder shown when no guide allocated	High	Student has only pending or rejected	1. Login as student with no accepted	Gray placeholder: 'No guide	PASS

TC ID	Test Case	Priority	Preconditions	Test Steps	Expected Result	Status
			requests; no accepted request	request 2. View My Guide section	allocated yet'; no faculty details shown	
TC-US10-03	Guide details are accurate	High	Accepted request exists; faculty details known in DB	1. Login as student 2. Cross-check name, department, domain in card against DB values	All three fields match DB exactly; no stale/ cached values	PASS
TC-US10-04	Allocation card refreshes without page reload after acceptance	Medium	Student has pending request that gets accepted mid-session	1. Student dashboard open with no allocation 2. Faculty accepts request in separate session 3. Student clicks any guide action (triggering refetch)	My Guide section updates to show allocated guide without full page reload	PASS
TC-US10-05	Unauthenticated access redirected to login	High	No valid token in localStorage	1. Clear localStorage 2. Navigate to / dashboard	Redirected to /login; My Guide section never rendered	PASS
